

Third Minute

Project: HomeMaid Development

Date: 15/10/2024

Time: 21:00

Attendees:

- Angela Ribeiro
- Regina Tavares
- Hugo Castro
- Rita Silva

Agenda:

1. Interface Design Layback
 2. Discussion of Team Policies
-

1. Interface Design Layback

Discussion:

The team discussed the layback design of the interface for the HomeMaid app. The focus was on creating a relaxed and user-friendly interface that aligns with modern UI/UX standards, prioritizing simplicity, ease of navigation, and accessibility.

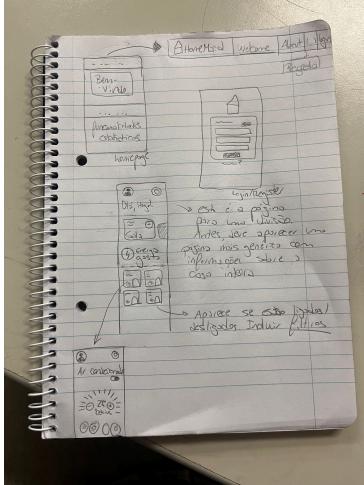

- **Regina Tavares** and **Hugo Castro** supported a minimalist design with fewer layers of interaction, emphasizing that a clean layout would help users navigate quickly without overwhelming them. Regina highlighted that the interface should adapt well to different devices, ensuring responsive design for both desktop and mobile platforms.
- **Angela Ribeiro** and **Rita Silva** suggested incorporating a more feature-rich interface in the future, with the potential for customization options for users. However, they agreed that the initial release should focus on a streamlined experience, with advanced features being added iteratively.

Conclusion:

The team agreed that the interface should have a clean, simple design for the first release, focusing on accessibility and responsiveness across devices. Advanced customization will be considered in future versions, once the core functionality is established.

- The team discussed how to organize the automations. Rita and Angela argued there was no point in having a different tab for automations, since the homepage just like the tab would be divided into different living spaces, therefore it can be redundant, and not helpful to the user.
- Hugo believed there should be more than one way to access the automated devices and that this would be more intuitive to the user, who could choose their favorite way of accessing this functionality. Additionally, he reinforced the fact that it should be possible to know which devices are automated.

- Regina didn't express an opinion.

Conclusion: The team came to the conclusion that an extra tab could be redundant or even overwhelming to the user, but agreed with Hugo that it should be possible to check the automated devices. We all agreed on adding filters to the main page.

After some brainstorming, we came to some conclusion on how some important pages should look like, Hugo wrote it down.

2. Discussion of Team Policies

Discussion:

The team reviewed policies regarding communication, task management, and decision-making processes. The following key points were raised:

- **Communication:** The team agreed to use Discord as the primary platform for daily communication and quick updates.
- **Task Management:** Tasks will be tracked in Github, with regular updates required from all members to ensure alignment on progress.
- **Decision-Making:** It was agreed that significant project decisions will require a majority vote, with the Team Manager, **Angela Ribeiro**, having the final say in case of a tie.

Conclusion:

The team confirmed these policies to maintain smooth collaboration throughout the project, ensuring clear expectations and responsibility sharing.
