Eleventh Minute

Project: HomeMaid Development
Date: 10/12/2024
Time: 19:00
Attendees:
● Angela Ribeiro
● Regina Tavares
● Hugo Castro
● Rita Silva

Agenda:

1. Prioritization of the capability for users to select which notifications they want to receive.
2. Discussion on the lack of time to implement alerts and the ability to add more rooms, and exploring their feasibility during the refinement phase.

---

1. Prioritization of Notification Selection

Discussion:
The team discussed the importance of allowing users to choose which notifications they want to receive. This feature was identified as a high priority due to its direct impact on user experience and customization of the application. By enabling users to tailor notifications to their preferences, the project aligns better with user needs and expectations.

Conclusion:
The capability for users to select notifications will be implemented as a priority in the upcoming iteration. This ensures that core functionalities of the application meet user requirements.

---

2. Discussion on Alerts and Adding More Rooms

Discussion:
The team addressed the lack of time to fully implement alert services and the ability to add more rooms. Both features were deemed as lower priority compared to critical tasks. However, the team decided to allocate extra time during the refinement phase to attempt their implementation, if resources permit.

Conclusion:
Alerts and the ability to add more rooms will be considered during the extra days allocated for refinements. If time constraints persist, these features will be revisited in future sprints.
